

National Sample Survey Office (NSSO)

- It came into existence in 1950 as Directorate of NSS, re-organized in March 1970 and it became NSSO;
- Headed by a DG & CEO;
- Conducts country wide socio-economic surveys. NSS 69th Round, presently in progress is on 'Drinking Water, Hygiene, Housing Condition including Slums.
- Enterprise surveys as a follow up of the Economic Census
- Provides technical guidance to states for crop estimation surveys under ICS scheme.
- Undertakes Annual Survey of Industries.
- Collects retail prices for CPI (R & U), CPI (A & R labour).
- Undertakes 'Urban Frame Survey' for maintains a frame of urban areal units for use in sample surveys in urban areas.
- Undertakes need based Methodological Studies and Base-line surveys and Evaluation Surveys (
- Functions under the technical control of a Steering Committee to impart objectivity and autonomy in the matter of collection of NSS data;
- Steering Committee consists of a non-official Chairman, five academicians, and others. DG & CEO is the Member Secretary to the Committee.
- Two most important publication
 - a. The reports on various round of the NSS.
 - b. The quarterly bulletin Sarvekshana.
- **NSSO** has four Divisions
 - Survey Design & Research Division (SDRD)
 - Field Operations Division (FOD)
 - Data Processing Division (DPD)
 - Coordination & Publication Division (CPD)

Survey Design & Research Division (SDRD)

SDRD is a professional organ of NSSO, mandated to do the job of:

- Planning of the survey
- Formulation of sample design
- Drawing up of schedules of enquiry
- Formulation of concepts and definitions
- Preparation of instruction manual for survey field work
- Training of field and data processing personnel on survey methodology
- Formulation of scrutiny check points
- Drawing up of tabulation programme
- Preparation of survey reports
- Analysis and presentation of survey results and
- Undertaking studies for the improvement of survey methodology

Field Operations Division (FOD) mostly by DES

- Headed by Additional Director General
- Responsible for conducting surveys in the field of –
 - Socio- Economic,
 - Industrial Statistics, (ASI)
 - Agricultural Statistics, (DES)
 - (DES) Prices, etc. or miscellaneous survey like CPI WPI and RPC rural price collection, Working Class Family Income & Expenditure Survey (WCFI&ES)
 - Urban Frame Survey
 - Other surveys / studies
 - Launched by Hon'ble Prime Minister Of India on 2nd October 2014 (Swachh bharat mission)
 - Carrying out the field work of Annual Survey of Industries (ASI) on behalf of CSO
 - Stratified multi-stage design is used.
 - WPI by office of economic adviser, the ministry of commerce and Industry, CPI by CSO.

1. Agricultural Statistics,

The supervision on field work for qualitative improvement in Agricultural Statistics is carried out through well-organized sample survey under **Improvement of Crop Statistics (ICS)** Scheme. The Scheme aims at pointing out, through joint efforts of Central and State agencies, the deficiencies in the State system of Crop Statistics and suggesting remedial measures for strengthening of the existing system. The ICS scheme is in operation in 18 Land Record States/UTs and 3 Non-land Record States.

- Responsibility of the state under DES of agriculture and irrigation as coordinating agency on land utilization and crop production mainly.
 - The first **Agriculture Census** in India was conducted in **1970-71**.
 - Indian agricultural statistics relate to agricultural year (July-June) and Indian forest statistics relate to the financial year (April-march).
 - The Agriculture Census in India is conducted **census-cum-sample survey** basis **quinquennially** i.e. at the interval of **Five-Years** and for the world it is **decennial**.
 - In India, the Agriculture Census data is collected following two broad approaches- in **Land Record** States, the information on number and area of operational holdings is re-tabulated by **Patwaris** from a register popularly known as **Khasra**. This category covers around 86% of total reported area of the country.
 - In **Non-Land Record** States, the data is collected on sample basis following **household enquiry** approach.
- Assistance to States through Centrally Sponsored Scheme of **Improvement of Agricultural Statistics (IAS)** consisting of:
 - Timely Reporting Scheme (TRS)
 - Establishment of an Agency for Reporting of Agricultural Statistics (EARAS), and
 - Improvement of Crop Statistics (ICS)

- The whole operation is completed in 3 Phases. In Phase-I, List of holdings through **schedule-1,2,3** with their operated area and social characteristics is prepared on **census basis** in land record States/UTs (covering about 86 % of operated area) and on 20 percent sample villages in non-land record States/UTs.
- In Phase-II, detailed data through **household schedule** on agricultural characteristics is collected on a **sample basis** from 20 percent selected villages, both in Land Record and Non-Land Record States, and the parameters are then estimated at the Tehsil/District/State level.
- In Phase-III, data on **input survey schedules** use pattern are collected on a **sample basis** from selected holdings from selected 7 percent villages and the parameters are estimated at the District/State level.

as per the approved programmes

- Headquarters located at New Delhi & Faridabad
- functions through a network of 6 Zonal Offices, 49 Regional Offices and 116 Sub-Regional Offices spread throughout the country and
- All the Zonal Offices are headed by Deputy Director Generals while the head of Regional Offices are Deputy Director General/ Director level officers except for Port Blair which is headed by Assistant Director.
- Staff strength of about 4000.
- Field official are periodically trained in survey techniques.
- Field work is done strictly as per work plan
- Data collected from field is subject to thorough scrutiny before its transmission for processing.

The Data Processing Division (DPD)

- Headed by Additional Director General
- Headquarters at Kolkata and has six Data Processing Centers at Kolkata, Ahmadabad, Bangalore, Delhi, Giridih and Nagpur
- Primarily mandated to undertake the processing, the tabulation and the dissemination of data collected Large Scale Sample Surveys conducted by NSSO.
- DPD also assists the States by providing complete IT solutions in all their data processing related activities and also through periodic training/workshop and other interactive methods.
- It also helps other countries/organizations in enhancing their capacity building particularly in data processing /analysis by conducting various need-based training programmes.

Main functions of DPD

- Maintenance of sampling frame and Updation of Urban Frame Survey Database.
- Selection of samples and preparation of Sample lists.
- Manual checking of identification particulars and pre data entry scrutiny.
- In-house development of validation and tabulation software.
- Data Entry & Verification of filled-in schedules.
- Validation of data through various stages covering both content check and coverage check.
- Tabulation of validated data as per approved tabulation plan.
- Processing & tabulation of monthly Rural retail price data and release of Quarterly Rural Price Bulletin.
- Assistance to state statistical agencies in processing of NSS state sample data.
- Providing training in application of computer and on data processing.

Providing technical guidance/assistance to NSS Data Users.

Co-ordination & Publication Division (CPD)

- **Located at New Delhi** and is responsible for:
 - Coordinating the activities of all the Divisions of NSSO
 - Dissemination of survey results and analysis through the biannual technical journal 'Sarvekshana' and 'National Seminars' to discuss the survey results
 - Providing technical and secretarial assistance to Steering Committee of National Sample Surveys
 - Supplying survey data of two individuals, researchers, research institutions and other private and govt. bodies
 - Liaison with other Departments/ Ministries on various matters concerning NSSO
 - Providing the technical and secretarial assistance to DG & CEO of NSSO

Broad Subjects covered by NSS and Indicators

- Household Consumer Expenditure
 - Level and Pattern of Household Consumer Expenditure
 - Nutritional Intake
 - Commodity wise consumption
 - Adequacy of Food
 - Differences in Levels of Consumption among socio-economic groups
 - Energy used.
 - Use of Durable Goods
 - Consumption from Public Distribution System
- Employment – Unemployment and Migration
 - Labour Force Parameters by Age, Sex, Industry/Occupation classification, Sector and States
 - Employment – Unemployment situation among religious groups and social groups
 - Employment – Unemployment situation in cities and towns

- Participation of Indian Women in household work and in other specified activities
 - Non-Agricultural Workers in Informal Sector etc.
 - Nature, Reason and other Aspects of Migration
- Household Wealth and Finance
 - Household Assets and Liabilities
 - Household Indebtedness
 - Household Borrowings and Repayments
 - Household Capital Expenditure
- Health & Hygiene
 - Morbidity and Treatment of Ailments
 - Health Care and the condition of Aged
 - Maternal and Child health care
 - Profile of Disabled Persons
 - Housing Condition, Drinking Water, Sanitation and Hygiene
 - Condition of Urban Slums etc.
- Education
 - Literacy and Levels of Education
 - Attending Educational Institution – its level, nature and expenditure on education
 - Status of Education and Vocational Training
 - Economic Activities and School Attendance Children etc.
- **Literacy rate**
 - Effective Literacy rate = $(\text{Number of Literates of 7+} / \text{Population age 7+}) \times 100$
 - Crude Literacy rate = $(\text{Number of Literates} / \text{Population}) \times 100$
 - Came in existence in 1991
 - 74 % were literate in 2011 census, 50.5 female and 49.5 male
 - 0-6 age population are illiterate

- Non-Agricultural Enterprises
 - Manufacturing: Size, Employment and other key estimates; Salient Features; Assets and Borrowings of Enterprises
 - Trade: State Level Results for Small Trading Units
 - Services: Salient Features and Characteristics of Enterprises in Un-Organized Service Sector etc.
 - Informal Sector
- Land Holdings, Livestock Holdings and Other Agrarian Issues
 - Household Ownership Holdings
 - Seasonal Variations and other Aspects
 - Consumption by Farmer Households
 - Access to Modern technology for Farming
 - Income, Expenditure and Productive Assets
 - Some Aspects of Farming
 - Cultivation of Selected Crops
 - Ownership of Livestock etc.
- Other Subjects

- Common Property Resources
- Travel by Indian Households
- Village Facilities in India
- Culture
- Prices etc.

Recent NSS Rounds

- NSS 71st Round (Jan 14 – June 14)
 - Health and Morbidity
 - Education and IT Literacy
- NSS 72th Round (July 2014 - June 2015)
 - Domestic Tourism Expenditure'
 - Household Expenditure on Services and Durable Goods
- NSS 73th Round (July 2015-June 2016)
 - Unincorporated Non-Agricultural Enterprises in Manufacturing
 - Trade and Other Services (excluding construction).
- NSS 74th Round (July 2016 - June 2017)
 - Drinking Water, Sanitation, Hygiene
 - Housing Conditions
 - Particulars of Slums
- NSS 75th Round (July 2017 - June 2018)
 - Household Consumer Expenditure
 - Household social consumption on Health and Education
- NSS 76st Round (July-December 2018)
 - Person with disabilities
 - Drinking water, sanitation, hygiene and housing condition
- NSS 77th Round (January - December 2019)
 - 'Land and livestock holdings of the households and situation assessment of agricultural households'
 - 'Debt and investment'.
- NSS 78st Round (January–December 2020)
 - Survey on domestic tourism Expenditure
 - Multiple Indicator Survey (MIS) for SDG 2030
 - For the first time in NSS, a questionnaire format will be used for collection of data in NSS

The Decennial Programme of NSS

- Topics would be covered once in 10 years:
 - population, births, deaths, disability, morbidity, fertility, maternity and child care and family planning

- debt & investment and capital formation
 - land holdings and livestock enterprises.
- Topics would be covered once in 5 years:
 - employment and unemployment, rural labour enquiry and consumer expenditure
 - self-employment in the non-agricultural sector. (some minor modifications in this programme are admissible.)
- This takes away 7 out of 10 years of a cycle.
- The remaining 3 years kept open for trying out surveys on subjects as yet unexplored as also to accommodate special requests from Central or State Governments.

Programme Implementation Wing

Responsibilities

- Monitoring of the Twenty Point Programme (TPP);
- Monitoring the performance of the country's eleven key infrastructure sectors, viz., Power, Coal, Steel, Railways, Telecommunications, Ports, Fertilizers, Cement, Petroleum & Natural Gas, Roads and Civil Aviation;
- Monitoring of all Central Sector Projects costing Rs.150 crore and above; and
- Monitoring the implementation of Member of Parliament Local Area Development Scheme (MPLADS).

Twenty Point Programme

- ✓ *Objective: To eradicate poverty and improve the quality of life of the poor and under-privileged population of the country*
- TPP is a package of schemes relating to poverty alleviation, employment generation, education, health etc.;
- Started in 1975 - restructured in 1982 and again in 1986, last in 2006;
- TPP-2006 covers 66 items;
- Administered by Central Nodal Ministries and implemented through State Governments;
- The Ministry is responsible for overall monitoring of the Programme through Monthly Progress Report (MPR), Capsule Report; and Yearly Reviews.

Member of Parliament Local Area Development Scheme (MPLADS)

- Scheme launched in 1993-94
- To provide a mechanism for Members of Parliament to recommend works of developmental nature for creation of durable community assets and for provision of basic facilities including community infrastructure, based on locally felt needs
- ✓ Started with Rs. 5 lakh per MP. Amount increased to Rs 5 Cr.
- ✓ Funds under MPLADS are non-lapsable plan funds;
- ✓ Budget for 2009-10 is Rs. 1580 Cr;
- ✓ Objective is to create community assets based on locally felt needs;

Infrastructure and Project Monitoring Division

Infrastructure Monitoring:

- Monthly Monitoring of Performance of 11 key infrastructure sectors viz., Power, Coal, Steel, Railways, Telecommunications, Ports, Fertilizers, Cement, Petroleum & Natural Gas, Roads, and Civil Aviation.

Project Monitoring:

- Monitoring Central Sector Projects costing Rs. 150 crore and above in 16 sectors;
- Monitoring of Accelerated Irrigation Benefit Programme (AIBP).

Statistics Day

In recognition of the notable contributions made by (Late) Professor Prasanta Chandra Mahalanobis in the fields of economic planning and statistical development, the Government of India has designated **29th June** every year, coinciding with his birth anniversary, as the Statistics Day in the category of Special Day to be celebrated at the national level.

To create public awareness among the people, especially the younger generation, for drawing inspirations from (Late) Prof. Mahalanobis about the role of statistics in socio-economic planning and policy formulation.

Indian Statistical Institute

- ✓ An autonomous institute under the administrative control of this Ministry.
 - Came into existence in 1931, founded by Prof Mahalanobis;
 - Declared an institute of national importance by an Act of Parliament in 1959.
 - It has 4 Centers in Delhi, Bangalore and Chennai & Tejpur;
 - The ISI Council is the highest policy-making body of the Institute;
 - MOSPI is the nodal Ministry for the ISI and for ensuring its functioning in accordance with the provisions of ISI Act, 1959.
- ✓ Empowered to conduct courses in
 - Statistics,
 - Mathematics,
 - Quantitative Economics,
 - Computer Sciences and
 - Other subjects related to natural sciences and social sciences.
- ✓ The Institute is fully funded by the Central Government.

Health Statistics under M/o of Health and Family Welfare

- Responsible for implementation of various health and family welfare programmes through the State Governments
- **4 Departments**
 - a) Department of Health and Family Welfare- Statistics Division
 - b) Department of AYUSH
 - c) Department of Health Research
 - d) Department of AIDS Control

Dept. Of Health & Family Welfare Statistics Division

The main statistical activities of the Statistical Division are:

- Routine Monitoring of the Programmes under Health Management Information System which is web-based data capturing system
- Validation of data through various techniques.
- Evaluation of the various Surveys.
- Monitoring Population Research Center, International Institute of Population Sciences (IIPS), National Institute of Health and Family Welfare (NIHFW). It organizes large scale sample surveys like The National Family Health Survey (NFHS).
- Districts Level Household Surveys (DLHS)
- Annual Health Surveys (AHS) – This is being conducted by O/RGI, IIPS has been the nodal agency for conducting surveys like NFHS, DLHS.

Health Surveys

- **National Family Health Survey (NFHS)**
 - a) Objective - To provide data on important components of population growth and various aspect of family planning
 - b) Data on Fertility, Family planning use and demand, Breast feeding practices, Infant and child mortality, Knowledge of HIV/AIDS, Women's nutrition etc.
 - c) 4 NFHS Surveys: 1991-92, 1998-99, 2005-06, 2014-15
 - d) Equipped to give estimates at various disaggregation levels including slum, non-slum estimates

- **District Level Health Survey (DLHS)**

- e) Objective - To provide data on key indicators of reproductive and child health at district level
- f) Data on antenatal care and immunization coverage, extent of safe deliveries, contraceptive prevalence, maternity mortality
- g) DLHS in 1998-99, 2002-03, 2007-08, 2012-13

- **Annual Health Survey (AHS)**

- h) Objective – To yield benchmarks of core vital and health indicators at the district level and to map changes therein on an annual basis
- i) Data on vital rates in 8 EAG states and Assam
- j) Awaited data on fertility, neo-natal care, post-natal care, morbidity etc. as district factsheets
- k) First round in 2010-11 and field work has started for next year

HUMAN DEVELOPMENT INDEX

The United Nations Development Programme (UNDP) ranks countries into four tiers of human development by combining measurements of life expectancy, education, and per-capita income into the Human Development Index (HDI) in its annual Human Development Report.

The HDI is a summary index using life expectancy at birth, expected years of schooling for children and mean years of schooling for adults, and GNI per capita. The final HDI is a value between 0 and 1 with countries grouped into four categories depending on the value, very high for HDI of 0.800 and above, high from 0.700 to 0.799, medium from 0.550 to 0.699 and low below 0.550.

Government of India Ministry of Statistics and Programme Implementation

Home > Agriculture Statistics

Agriculture statistics

> Crop Area Statistics (Para 4.2.23)

- > As the data from a 20 per cent sample is large enough to estimate crop area with a sufficient degree of precision at the all-India, State and district levels, crop area forecasts and final area estimates issued by the Ministry of Agriculture should be based on the results of the 20 per cent Timely Reporting Scheme (TRS) villages in the temporarily settled States and Establishment of an Agency for Reporting Agricultural Statistics (EARAS) scheme villages in the permanently settled states. In the case of the North-Eastern States, Remote Sensing methodology should be used for this purpose after testing its viability.
- > The patwari and the supervisors above him should be mandated to accord the highest priority to the work of the girdawari and the patwari be spared, if necessary, from other duties during the period of girdawari.
- > The patwari and the primary staff employed in Establishment of an Agency for Reporting Agricultural Statistics (EARAS) should be imparted systematic and periodic training and the fieldwork should be subjected to intensive supervision by the higher-level revenue officials as well as by the technical staff.
- > For proper and timely conduct of the girdawari, the concerned supervisory staff should be made accountable.
- > Timely Reporting Scheme (TRS) and Establishment of an Agency for Reporting Agricultural Statistics (EARAS) scheme should be regarded as programmes of national importance and the Government of India at the highest level should prevail upon the State Governments to give due priority to them, deploy adequate resources for the purpose and ensure proper conduct of field operations in time.

> Crop Production (Para 4.3.12)

- > In view of the importance of reliable estimates of crop production, the States should take all necessary measures to ensure that the crop cutting surveys under the General Crop Estimation Survey (GCES) are carried out strictly according to the prescribed programme.
- > Efforts should be made to reduce the diversity of agencies involved in the fieldwork of crop cutting experiments and use as far as possible agricultural and statistical personnel for better control of field operations.
- > A statistical study should be carried out to explore the feasibility of using the Improvement of Crop Statistics (ICS) data for working out a correction or adjustment factor to be applied to official statistics of crop area to generate alternative estimates of the same. Given the past experience of the Land Utilisation Surveys of the NSS and the controversies they created, the Commission is of the view that the objective of redesigning of the ICS, at present, should be restricted to working out a correction factor.
- > The two series of experiments conducted under the National Agricultural Insurance Scheme (NAIS) and the General Crop Estimation Survey (GCES) should not be combined for deriving estimates of production as the objectives of the two series are different and their merger will affect the quality of general crop estimates.
- > Crop estimates below the level of district are required to meet several needs including those of the National Agricultural Insurance Scheme (NAIS). Special studies should be taken up by the National Statistical Office to develop appropriate "small area estimation" techniques for this purpose.

> Crop Forecasts (Para 4.4.8)

- > The Ministry of Agriculture and the National Crop Forecasting Centre (NCFC) should soon put in place an objective method of forecasting the production of crops.
- > The National Crop Forecasting Centre (NCFC) should be adequately strengthened with professional statisticians and experts in other related fields.
- > The programme of Forecasting Agricultural output using Space, Agro-meteorology and Land based observations (FASAL), which is experimenting the approach of Remote Sensing to estimate the area under principal crops should be actively pursued.
- > The States should be assisted by the Centre in adopting the objective techniques to be developed by the National Crop Forecasting Centre (NCFC).

> Production of Horticultural Crops (Para 4.5.7)

- > The methodology adopted in the pilot scheme of "Crop Estimation Survey on Fruits and Vegetables" should be reviewed and an alternative methodology for estimating the production of horticultural crops should be developed taking into account information flowing from all sources including market arrivals, exports and growers associations. Special studies required to establish the feasibility of such a methodology should be taken up by a team comprising representatives from Indian Agricultural Statistics Research Institute (IASRI), Directorate of Economics and Statistics, Ministry of Agriculture (DESMOA), Field Operations Division of National Sample Survey Organisation (NSSO (FOD)) and from one or two major States growing horticultural crops. The alternative methodology should be tried out on a pilot basis before actually implementing it on a large scale.
- > A suitable methodology for estimating the production of crops such as mushroom, herbs and floriculture needs to be developed and this should be entrusted to the expert team comprising representatives from Indian Agricultural Statistics Research Institute (IASRI), Directorate of Economics and Statistics, Ministry of Agriculture (DESMOA), Field Operations Division of National Sample Survey Organisation (NSSO (FOD)) and from one or two major States growing these crops.

> Land Use (Para 4.7.7)

- > The nine-fold classification of land use should be slightly enlarged to cover two or three more categories such as social forestry, marshy and water logged land, and land under still waters, which are of common interest to the centre and States, and which can easily be identified by the patwari through visual observation.

- State Governments should ensure that computerisation of land records is completed expeditiously.
- **Irrigation Statistics (Para 4.8.15)**
 - In view of wide variation between the irrigated area generated by the Ministry of Agriculture and the Ministry of Water Resources, the State Governments should make an attempt to explain and reduce the divergence, to the extent possible, through mutual consultation between the two agencies engaged in the data collection at the local level.
 - The State Directorates of Economics and Statistics (DESSs) should be made the nodal agencies in respect of irrigation statistics and they should establish direct links with the State and Central agencies concerned to secure speedy data flow.
 - Statistical monitoring and evaluation cells with trained statistical personnel should be created in the field offices of the Central Water Commission (CWC) in order to generate a variety of statistics relating to water use.
 - The Central Statistical Organisation (CSO) should designate a senior level officer to interact with the Central and State irrigation authorities in order to promote an efficient system of water resources statistics and oversee its activities.
- **Land Holdings and Agricultural Census (Para 4.9.13)**
 - The Agricultural Census should henceforth be on a sample basis and the same should be conducted in a 20 per cent sample of villages.
 - There should be an element of household enquiry (besides re-tabulation) in the Agricultural Census in the temporarily settled States.
 - Computerisation of land records should be expedited to facilitate the Agricultural Census operations.
 - There should be adequate provision for effective administrative supervision over the fieldwork of Agricultural Census and also a technical check on the quality of data with the help of the State statistical agency.
 - The post of the Agricultural Census Commissioner of India at the Centre should be restored and should be of the level of Additional Secretary to be able to interact effectively with the State Governments. Further, this post should be earmarked for a senior statistician.
 - The Census Monitoring Board should be revived to oversee the Agricultural Census operations.
- **Agricultural Prices (Para 4.10.10)**
 - The Ministry of Agriculture should prepare a well-documented manual of instructions on collection of wholesale prices of agricultural commodities.
 - The agricultural price collectors should be given thorough training in the concepts, definitions and the methods of data collection, and the training courses should be repeated periodically.
 - Workshops and training courses should be made an integral part of quality improvement. The quality of data should be determined on the basis of systematic analysis of the price data of agricultural commodities both by the Centre and the States.
 - Latest tools of communication technology like e-mail should be availed of to ensure timely data flow of agricultural prices.
 - A system should be developed to secure a simultaneous data flow of agricultural prices from lower levels to the State as well as the Centre.
 - The State agencies at the district level and below should follow up cases of chronic non-response relating to collection of data on agricultural prices.
 - The number of essential commodities for which agricultural prices are collected should be reduced to an absolute minimum, especially the non-food crops, in consultation with Ministry of Consumer Affairs and Cabinet Committee on Prices.
 - The centres of agricultural price collection should, as far as possible, be the same for the essential commodities as those for wholesale prices.
- **Agricultural Market Intelligence (Para 4.11.4)**
 - The functions, activities and the staff requirements of the Agricultural Market Intelligence Units should be re-evaluated and appropriate measures taken to streamline the units.
- **Cost of Cultivation of Principal Crops (Para 4.12.6)**
 - In view of the importance of the Cost of Cultivation Studies in the price administration of agricultural commodities and several studies relating to farm economy, the present programme should continue.
 - Focused attention should be paid to the proper organisation and management of the Cost of Cultivation Studies.
 - A review of the number of centres, methodology, sample size, the existing schedule and questionnaire, etc. of the Cost of Cultivation Studies should be undertaken.
 - The Directorate of Economics and Statistics, Ministry of Agriculture (DESMOA) should minimise the delay in bringing out the results of the Cost of Cultivation Studies.
- **Livestock Numbers (Para 4.13.7)**
 - The quinquennial Livestock Census should henceforth be taken in a 20 per cent sample of villages instead of a cent per cent coverage.
 - The Livestock Census should include some minimum information about the household (size, occupation, etc.) in addition to the head count for more meaningful analysis of the census data.
 - There should be a concerted effort towards better organisation and management of the Livestock Census operation through comprehensive training of the field staff and regular supervision over their work by both administrative and technical personnel.
 - Information Technology tools should be used at various stages of the Livestock Census for rapid processing and preparation of the final reports as well as improving the quality of the data.
- **Integration of Livestock and Agricultural Censuses (Para 4.14.3)**
 - The Livestock and Agricultural Censuses should be integrated and taken together in a 20 per cent sample of villages.
 - Before effecting the integration of Livestock and Agricultural Censuses a limited pilot investigation be undertaken to firm up the procedures of integration.
 - The periodical National Sample Survey Organisation's survey on land and livestock holdings be synchronised with Agricultural and Livestock Censuses in order to supplement as well as help in the crosscheck of information from the two sources.
- **Livestock Products (Para 4.15.6)**
 - The Integrated Sample Surveys should be continued and efforts should be made to fill up the existing data gaps.

- The Indian Agricultural Statistics Research Institute (IASRI) should be entrusted with the task of developing appropriate methodologies for filling up the remaining data gaps relating to estimates of mutton, pork, poultry meat, and meat by-products.

➤ Fisheries Statistics (Para 4.16.10)

- The survey design for estimating production of marine fisheries should be modified taking into account the current distribution of landing sites and the volume of catch at different sites. The field staff engaged in collection of data should be imparted regular training and their work should be adequately supervised.
- The survey methodology for estimating production of inland fisheries especially with regard to running water sources (rivers and canals) should receive urgent attention and the Indian Agricultural Statistics Research Institute (IASRI) along with the Central Inland Fisheries Research Institute (CIFRI) should be provided with adequate support to develop this programme on a priority basis.
- The States should improve the recording of area under still water by appropriate modification of land use statistics.
- The discrepancies between the two sources of data namely, Livestock Census and State reports with regard to data on fishermen, fishing craft and gear should be reconciled by adoption of uniform concepts and definitions and review of these statistics at the district and State levels.

➤ Forestry Statistics (Para 4.17.10)

- Remote Sensing techniques should be extensively used to improve and develop forestry statistics.
- The State Forest Departments should be adequately supported by the establishment of appropriate statistical units to oversee the collection and compilation of forestry statistics from diverse sources on forest products including timber and non-timber forest products.
- Arrangements should be made for storage and speedy transmission of forestry data through Information Technology devices.
- In view of the unavoidable nature of the divergence between statistics from the two sources – land records and State Forest Departments – because of different coverage and concepts, the two series should continue to exist; but the reasons for divergence should be clearly indicated to help data users in interpreting the forestry statistics.
- A Statistics Division in the Ministry of Environment and Forests with adequate statistical manpower should be created for rationalisation and development of proper database on forestry statistics.

➤ Marketable Surplus and Post-Harvest Losses (Para 4.18.4)

- The existing methodology in conducting the surveys on marketable surplus and post-harvest losses of food grains should continue in future surveys of this type.
- The agencies designated for the collection of information on marketable surplus and post-harvest losses of food grains should be provided additional manpower, wherever necessary, for the conduct of these surveys.

➤ Market Research Surveys (Para 4.19.4)

- The Directorate of Marketing and Inspection (DMI) should establish a Statistical Cell either independently or within Market Research and Planning Cell (MRPC) with sufficiently trained statistical personnel to undertake comprehensive analysis of survey data and aid the decision-making process.
- The Statistical Cell of Directorate of Marketing and Inspection (DMI) should identify the problems and deficiencies in the market research surveys carried out by different institutions and develop a standard methodology for uniform adoption.

➤ Index Numbers in Agriculture (Para 4.20.8)

- A review of the item basket for the construction of Index Numbers of Area, Production and Yield should be undertaken immediately.
- The item basket for the construction of Index Numbers of Area, Production and Yield should be different for different States.
- The present arrangements for the construction and release of Index of Terms of Trade should continue.

➤ Recording of Area under Mixed Crops (Para 4.21.5)

- The rates used to apportion the areas of constituent crops of major crop mixtures should be fixed for the recognised mixtures at sub-district and district levels and updated periodically.
- Data available from surveys conducted under schemes like Improvement of Crop Statistics (ICS) over the years should be used for deciding the crop mixtures and their ratios.

➤ Input Statistics (Para 4.22.8)

- The Directorate of Economics and Statistics, Ministry of Agriculture (DES/MA) should collect, compile and maintain a complete database on State-wise production, sale of tractors, power tillers, harvesters and other agricultural implements, density of such implements per hectare, investment made, level of mechanisation, adoption of water saving devices, etc.
- A Farm Management Survey on an all-India basis should be conducted on a regular basis preferably at an interval of five years.
- The Directorate of Plant Protection Quarantine and Storage (PPQ&S) being the apex body for plant protection should act as a depository of information on plant protection. Efforts should be made to design, develop and maintain a comprehensive database on plant protection for effective long-term uses.
- The Statistics and Computer Unit of the Directorate of Plant Protection, Quarantine and Storage (PPQ&S) should be strengthened both in terms of statistical and computer personnel as well as computer equipment.
- Information collected through General Crop Estimation Survey (GCES) and the scheme for Improvement of Crop Statistics (ICS) should be compiled to generate estimates on various inputs such as fertilisers, pesticides, multiple cropping, etc.

Calculation of MSP

Government fixes Minimum Support Price (MSP) on the basis of recommendations of Commission for Agricultural Costs and Prices (CACP).

The Union Budget for 2018-19 had announced the pre-determined principle to keep MSP at levels of one and half times of the cost of production. Accordingly, Government has increased the MSP for all mandated Kharif, Rabi and other commercial crops with a return of atleast 50 per cent of cost of production for the agricultural year 2018-19 and 2019-20.

From time to time, some farmers and farmers' organizations have been agitating and making certain demands like increase in MSP for agricultural crops on the basis of C2 system.

Cost of production is one of the important factors in the determination of MSPs. While recommending its price policy, the CACP considers all costs in a comprehensive manner which is based on the methodology recommended by Expert Committees from time to time.

CACP considers both A2+FL and C2 costs while recommending MSP. CACP reckons only A2+FL cost for return. However, C2 costs are used by CACP primarily as benchmark reference costs (opportunity costs) to see if the MSPs recommended by them at least cover these costs in some of the major producing States.

Government's price policy is to ensure remunerative prices to farmers by offering to procure their produce at MSP. However, farmers are free to sell their produce to the Government procurement agencies at MSP or in the open market whichever is advantageous to them.

Apart from increasing MSP, Government has taken several steps to provide remunerative prices to farmers for their produce which include undertaking procurement through designated procurement agencies, implementing e-National Agriculture Market (eNAM), enacting the Model Agricultural Produce and Livestock Marketing (Promotion & Facilitation) Act, 2017 and promoting Farmer Producer Organizations (FPOs).

The Government is working on market architecture so as to ensure that farmers get remunerative prices on their produce. These include setting up of Gramin Agricultural Markets (GrAMs) with a view to promote 22,000 number of retail markets in close proximity of farm gate; competitive and transparent wholesale trade at APMC through e-NAM.

The recently launched Umbrella Scheme "Pradhan Mantri Annadata Aay Sanraksha Abhiyan (PM-AASHA)" provides for a holistic arrangement for assurance of a remunerative price for farmers. This Umbrella Scheme comprises Price Support Scheme (PSS) for pulses, oilseeds and copra, Price Deficiency Payment Scheme (PDPS) and Pilot of Private Procurement & Stockist Scheme (PPSS) for oilseeds to ensure MSP to the farmers.

MSP operations are given wide publicity through pamphlets, banners, sign boards, radio, TV and advertisements through print & electronic media. In addition to that farmers are made aware of the quality specifications and purchase system to facilitate the farmers to bring their produce conforming to the specifications.

This information was given in a written reply by the Union Minister of Agriculture and Farmers Welfare, Shri Narendra Singh Tomar in Lok Sabha today.

Industrial statistics

Annual Survey of Industries (ASI)

> ASI Frame (Para 5.1.24)

- > The Chief Inspectors of Factories (CIFs) should update their own lists by including those units, which ought to be there in the lists and excluding the units that do not operate.
- > The Central Statistical Organisation (CSO) and the National Sample Survey Organisation (NSSO) should take immediate steps to prepare directories of establishments (that employ at least 10 workers) based on data collected in the Fourth Economic Census and the recent Follow-up Enterprise Surveys of Economic Census, respectively so that these could be made use of by the CIFs in their work of updating the lists maintained by them.
- > The work of preparation of a comprehensive frame for selection of samples in the Annual Survey of Industries (ASI) should be taken up jointly as a task on a priority basis by the NSSO and the CSO. This comprehensive frame should be prepared by taking into account the lists maintained by the CIFs, the directories of establishments prepared by the CSO and the NSSO and information available from other sources.
- > The comprehensive frame so prepared should be updated on a continuing basis using survey and census data as well as information available from other sources. The additional resource requirements for carrying out the work should also be met.
- > The State Level Coordination Committee (SLCC) should be reconstituted with the Secretary, Department of Industry, as the Chairman and the Labour Commissioner, Chief Inspector of Factories, Director of Industries, etc. as members so as to ensure greater vigour and discipline in the task of revision of the frames.
- > The CIFs should take steps to simplify the process of de-registration of closed units so that units non-operating for a long time could be removed from the registers of factories of the CIFs.

> Accuracy of the Estimates – Sampling and Non-sampling Errors (Para 5.1.29)

- > The effect of the changes made from time to time in the sampling design, including changes in sample size, on survey estimates should be analysed and the findings brought out regularly whenever such changes take place.
- > The sampling errors of estimates of important survey characteristics should be published along with the survey results.
- > The sampling design and the sample size should be reviewed to improve the precision of estimates at industry-group level. There is a need to increase the sample size for at least some of the industries where the sampling errors of the estimates are very high.
- > Non-sampling errors in the data should be regularly studied and measures should be taken to minimise them.
- > Factors responsible for wide divergence of summary or provisional results from detailed or final results need to be identified and steps taken to minimise such divergence.

> One-time Census of Industries (Para 5.1.31)

- > A one-time census of industrial units which are eligible for registration should be conducted. While there should be a complete enumeration of all the units already included in the CIF list, the excluded units could be covered either by a sample or on a complete enumeration basis in the census. Such a census will help in generating reliable benchmark estimates at the disaggregated level (by geographical region, industry group, product level, etc.), providing an efficient weighting diagram for revision of the base year of the Index of Industrial Production, and also updating of the ASI frame.
- > Before such a census is launched on a full scale, an exercise on a pilot basis should be carried out to explore the usefulness of the various alternative sources of information for preparing a comprehensive frame, and also to estimate resource requirements for conducting the one-time census.

> Schedule for Data Collection, Computerisation and Use of IT Network (Para 5.1.34)

- > The schedule of data collection should be rationalised to make it as respondent-friendly as possible and designed in a computer-readable form.
- > The query, 'whether the industrial unit can supply ASI data on a floppy on software to be provided' that formed part of the schedule of ASI 1997-98 but was subsequently dropped should be reintroduced. This would help in identifying units that are capable of furnishing information through floppy or other electronic media.
- > Information on input and output items clubbed under the large 'others' category should be obtained in a more disaggregated form through the schedule. Items having importance in value terms, at least, should be separated from 'others'. This is particularly important for the census sector units.
- > For bringing about further improvement in the quality of data and a timely release of results, the cooperation of the factories should be solicited, through the Industry Associations and Chambers of Commerce, for supplying the required information in a pre-designed format in the electronic media.
- > Steps should be taken for data transmission from factories and field offices of NSSO to the tabulating agency in the form of digitised schedules using the countrywide Information Technology (IT) network.

> Timeliness of Processing (Para 5.1.35)

- > Further measures should be taken to ensure the timely processing of data on a regular basis and release of the final results of ASI within one year of commencement of the fieldwork.

- An advance calendar for release of quick estimates, provisional results, and final results should be declared through appropriate media, including a website.

➤ State Participation in ASI (Para 5.1.37)

- The existing system of independent tabulation of ASI data by both the agencies should continue.
- States and Union Territories should canvass the ASI schedules in the residual units (i.e., not covered by the NSSO) in their respective States and Union Territories, either on a sample or on a complete enumeration basis, whenever the required infrastructure and resources are available. For that purpose, the Government of India should declare, under the Collection of Statistics Act the Directors of the States' Directorates of Economics and Statistics as statistical authority within the respective States, for the collection of ASI data and such other industrial statistics as the Government of India collects in its national programme.

Surveys on Unregistered Manufacture

➤ Divergence in the Alternative Data Sets (Para 5.2.20)

- Uniform concepts and definitions should be adopted in the censuses and the sample surveys in defining the enterprises and workers. In case of non-uniformity, provisions must be made in the census and survey questionnaires so that it is possible to generate comparable estimates for a cross-examination of data and to take remedial measures in case of divergences in the data.
- The advisory working groups and technical committees set up by the National Commission on Statistics should ensure standardisation of concepts and definitions in the censuses and sample surveys, to the extent possible.
- The National Sample Survey Office should regularly study the extent of divergences in the alternative data sets so as to identify the reasons for divergences and suggest remedial measures. As the village and urban block level data of the number of enterprises and workers as per the Economic Census (EC) are used as the sampling frame for selection of villages and urban blocks in the Follow-up Enterprise Surveys, necessary measures must be taken in the EC to enhance the quality of the data.

➤ Accuracy of the Survey Estimate (Para 5.2.26)

- Standard errors of important estimates should invariably be published in the reports.
- Post-survey evaluation should be regularly carried out to identify the deficiencies in the survey methodology for the purpose of taking remedial measures.
- There should be a regular interaction between the survey agencies and the data users to discuss the limitations of survey results with a view to taking necessary corrective steps for improving the quality of survey data.
- Until action is completed to cover all the bigger units in the ASI frame, steps should be taken in the Follow-up Enterprise Surveys to net such bigger units by proper stratification so as to improve the precision of the survey estimates.
- Measures such as strengthening of training, field visits and scrutiny of schedules by higher-level officers, interactive feedback session at the initial stage of the survey, etc. should be taken to minimise non-sampling errors in the surveys.
- Other measures like shortening of schedule and creating public awareness about the data requirements should also be taken to improve the quality of the data.
- It would be worthwhile to extend the provisions of the Collection of Statistics Act for surveys in respect of unregistered manufacture as well as other sectors as in the case of Annual Survey of Industries.

➤ Time Frame for Conducting the Surveys (Para 5.2.29)

- The time frame for covering various non-agricultural activities, including unregistered manufacture, through Follow-up Enterprise Surveys (FuS) should be finalised keeping in view the periodicity of data requirements by the users vis-à-vis resources available for handling the survey work.
- The collection of data relating to all types of unregistered manufacturing enterprises consisting of Own-account Manufacturing Enterprises (OAMEs), Non-directory Manufacturing Establishments (NDMEs) and Directory Manufacturing Establishments (DMEs) should be integrated in the FuS and it should be the responsibility of the NSSO to conduct such surveys, process the results and bring out the reports.

➤ State Participation (Para 5.2.31)

- Views of the State and Union Territory Governments should be solicited and measures should be taken for improving their data processing capabilities.
- The State and Union Territory Governments should actively involve the NSSO and the CSO in regular discussions and exchange of ideas for improvement of their system of data processing.

Small Scale Industries (Para 5.3.13)

- The representation of the Small Scale Industries (SSI) sector in the all-India Index of Industrial Production (IIP) should be improved by extending the coverage of items for which Development Commissioner, Small Scale Industries (DCSSI) is collecting regular monthly production data.
- Since the frames maintained by the source agencies do not make a distinction between the registered and unregistered units, a mechanism should be devised to avoid overlapping of units belonging to SSI and other source agencies, in respect of common items for which the production data is reported by two agencies.
- The Office of DCSSI should make efforts to compile monthly IIP as against the present practice of compiling quarterly IIP for monitoring the trend of the Small Scale Industries. Efforts should be made to enlarge the coverage of items in order to make the index more representative of the SSI sector. The base year of the two indices namely, all-India IIP and DCSSI index should be in close proximity if not the same.
- The Office of DCSSI should publish the index for use by the Government, private agencies and researchers.
- The Economic Census and the Follow-up Enterprise Surveys should collect the information on "investment in plant and machinery (original value)" and "whether registered as SSI unit or not". The Economic Census would help in providing the number of registered and unregistered SSI units while the Follow up Surveys would enable estimation of various parameters of these sectors. Similar information in ASI should also be collected to estimate the different characteristics of registered and unregistered SSI units in the total organised sector.
- With the availability of information on the SSI sector from the Economic Census and Follow-up Enterprise Surveys, as mentioned above, the utility of conducting a future census of small-scale units should be examined. The detailed information, if any, required for the sector could be collected through sample surveys.
