

- To facilitate evaluation over time, the Office of DCSSI should present data to enable time series comparison keeping in view the changes in the definition of the SSI sector.
- The NSSO as a part of their tabulation programme should generate data on the principal characteristics relating to the SSI sector to enable cross comparison with DCSSI data.
- Though administratively, the Small Scale Sector is divided into seven sub-sectors, which are under the control of different ministries and departments, the Office of DCSSI that is controlling the major segment of this sector, should coordinate with the remaining six departments and generate a database for the sector. Thereafter, efforts should be made to compile an index of the overall Small Scale Sector.

All-India Index of Industrial Production (Para 5.4.17)

➤ Index of Industrial Production

- Improvements in the Existing IIP
 - The item basket of the Index of Industrial Production (IIP) should be selected in such a way that the indices are representative of the growth in the industrial sector at least at the 2-digit level of National Industrial Classification (NIC).
 - The source agencies should make available the data on the additional items to be included in the item basket. The agencies should expand their database to capture new units and new items.
 - To ensure the availability of data on new items, the Central Statistical Organisation (CSO) should regularly provide the source agencies with:
 - The list of items that are just below the cut-off criteria of item selection and likely to figure in the revised item basket on the basis of the current series;
 - Items identified on the basis of detailed results of Annual Survey of Industries (ASI).

- The source agencies should also identify the important and fast-moving items for inclusion in their database for the purposes of administration and revision of IIP.
- The base year of the Index should be revised quinquennially by the Central Statistical Organisation to adjust to the structural changes in the industrial sector.

➤ Strengthening of Source Agencies

- The statistical set-up in Department of Industrial Policy and Promotion (DIPP) needs restructuring in terms of statistical manpower and infrastructure, preferably by creating a full-fledged statistical unit under the overall guidance of a professional statistician.
- The proposed statistical unit should be vested with the responsibility of maintenance of the frame, timely supply of monthly production data with an adequate response rate, exploring of suitable methodologies for dealing with non-response and improving the overall quality of data.
- The statistical set-up of other source agencies of the IIP also needs to be adequately strengthened.
- Since such strengthening will take some time, the agencies should, in the mean time, attempt to achieve a minimum standard for ensuring the quality and reliability of the Index, by adopting a suitable monitoring mechanism to target a response rate in terms of production of at least 60 per cent in the first month and 80 per cent at the final revision.
- The source agencies should correspond with the production units through fax, e-mail and telephone followed by a personal visit, if necessary, to minimise non-response. Cooperation from the Industrial Associations and State Governments should also be solicited in this context.
- Source agencies should preferably avoid inclusion of items for which very few units (say, less than 5) are reporting production, in order to avoid extreme fluctuations in the production data due to non-response. If, however, it is necessary to include some such items, the source agencies should make all efforts to closely monitor and collect data for these items.
- The problem of non-response needs greater and more detailed examination. Therefore, technical experts from the fields of industry and statistics should go into the question of whether statistical methods could be useful for the solution of this problem.

➤ Additional All-India Index of Industrial Production

- In view of the difficulties faced in the collection of data for compilation of IIP by the mail enquiry method, the possibilities of constructing an Additional Index of Industrial Production by direct collection of monthly production data on selected items from factories with 200 or more workers should be explored. This should first be done for one year on an experimental basis.
- For this purpose, the Field Operations Division (FOD) of the National Sample Survey Organisation (NSSO) should be entrusted with the task of collection of monthly production data under the existing legal provisions. The requirement of additional resources for this purpose should be met.
- Before the above suggestion of compilation of the Index is taken up, a study should be conducted to compare the annual growth rate in production, based on ASI data of recent years (for factories with 200 or more workers) and current IIP. The findings should be examined by the Standing Committee on Industrial Statistics regarding the workability and adoptability of this approach for compilation of the Additional Index of Industrial Production

➤ Use of other Administrative Data

- An exploratory study should be undertaken to examine the feasibility of using the production data as available with Central Board of Excise and Customs for compilation of an All-India Index of Industrial Production. The possibility of utilising data from other sources like sales tax for compilation of IIP, at least at the State level, should also be examined.

➤ Comparable State-level Indices of Industrial Production (Para 5.4.25)

- The present practice of using Gross Value Added (GVA) for preparation of weighting diagram for All-India Index of Industrial Production and Gross Value of Output for State Comparable Indices of Industrial Production would result in incomparability in the two methodologies. GVA should, therefore, be used for the State IIPs.
- Industrial Associations and State Industry Departments should be requested to impress upon their members and units to cooperate with the State and Union Territory (UT) Governments in supplying regular monthly production data to the State Directorates of Economics and Statistics so that the Comparable State-level Indices can be compiled and released regularly.
- Coordination mechanism needs to be established between the source agencies and the States and UTs for supply of regular production data.
- For the purpose of collection of necessary data, the State Directorates of Economics and Statistics (DESs) should be given authority as recommended by the Commission at Serial Number 22 above under State Participation in ASI.

- Vigorous efforts on the part of the States, with the help of industrial associations and State Industrial Departments are required to try out the mail methods i.e. fax, e-mail, etc. for collection of regular monthly production data.
- Additional resources to the States for compilation of State-level Comparable IIPs should be provided.

1. DEFINITION OF PERFORMANCE INDICATORS

1.1. Gross Enrolment Ratio in Early Childhood Development Programs

This indicator measures the general level of participation of young children in early childhood development programs. It indicates the capacity of the education system to prepare young children for elementary education. The system generates this indicator only up to the level of the legislative districts and above.

$$\frac{\text{Enrolment}_{\text{Pre-sch, SY N}}}{\text{Population}_{\text{Age 4-5, SY N}}} \times 100$$

Where:

- | | |
|-------------------------------------|---|
| Enrolment _{Pre-sch, SY N} | - Total Pre-school Enrolment (Table A - GESp; Table A1 - PSP) |
| Population _{Age 4-5, SY N} | - Projected 2002 population from NSO |

1.2. Percentage of Grade 1 Pupils with Early Childhood Development Programs

This indicator measures the level of participation of grade 1 pupils in ECD programs.

$$\frac{\text{Enrolment with ECD}_{\text{Gr 1, SY N}}}{\text{Enrolment}_{\text{Gr 1, SY N}}} \times 100$$

Where:

- | | |
|--|---|
| Enrolment with ECD _{Gr 1, SY N} | - Total Grade 1 Enrolment with ECD (Table B - GESp; Table A2 - PSP) |
| Enrolment _{Gr 1, SY N} | - Total Grade 1 Enrolment (Table B - GESp; Table A2 - PSP) |

1.3. Apparent/Gross Intake Rate

The Apparent Intake Rate reflects the general level of access to primary education. It also indicates the capacity of the education system to provide access to grade 1 for the official school-entrance age population. It is used as a substitute for Net Intake Rate in the absence of data on new entrants by single years of age. The system generates this indicator up to the level of the legislative districts and above.

$$\frac{\text{Enrolment}_{\text{Gr 1, SY N}}}{\text{Population}_{\text{Age 6, SY N}}} \times 100$$

Where:

- | | |
|-----------------------------------|--|
| Enrolment _{Gr 1, SY N} | - Total Grade 1 Enrolment (Table B - GESp; Table A2 - PSP) |
| Population _{Age 6, SY N} | - Projected 2002 population from NSO |

1.4. Net Intake Rate

This indicator gives a more precise measurement of access to primary education of the eligible, primary school-entrance age population than the Apparent Intake Rate.

$$\frac{\text{Enrolment}_{\text{Gr 1, Age 6, SY N}}}{\text{Population}_{\text{Age 6, SY N}}} \times 100$$

Where:

Enrolment _{Gr 1, Age 6, SY N}	- Total Age 6 Grade 1 Enrolment (Table B - GESp; Table A2 - PSP)
Population _{Age 6, SY N}	- Projected 2002 population from NSO

1.5. Gross Enrolment Ratio

The indicator is used to show the general level of participation in primary education. It is used in place of the Net Enrolment Ratio when data on enrolment by single years of age is not available. It can also be used together with the Net Enrolment Ratio to measure the extent of over-aged and under-aged enrolment. The system generates this indicator up to the level of the legislative districts and above.

$$\frac{\text{Total Enrolment}_{\text{All Ages, SY N}}}{\text{Population}_{\text{Age 6-11, SY N}}} \times 100$$

Where:

Total Enrolment _{All Ages, SY N}	- Total Enrolment (Table B - GESp; Table A2 - PSP)
Population _{Age 6, SY N}	- Projected 2002 population from NSO

1.6. Net Enrolment Ratio

The indicator provides a more precise measurement of the extent of participation in primary education of children belonging to the official primary school age.

$$\frac{\text{Total Enrolment}_{\text{Ages 6-11, SY N}}}{\text{Population}_{\text{Age 6-11, SY N}}} \times 100$$

Where:

Total Enrolment _{Ages 6-11, SY N}	- Total Enrolment (Table B - GESp; Table A2 - PSP)
Population _{Age 6, SY N}	- Projected 2002 population from NSO

1.7. Survival Rate to Grade VI/Year IV

The Cohort Survival Rate computes the percentage of a cohort of pupils/students who are able to reach grade VI/Year IV. It is used to assess the internal efficiency and “wastage” in education. This indicator is vulnerable to migration and caution should be used in computing at the school level.

The system adopted the reconstructed cohort method, shown below, in calculating the Cohort Survival rate:

Step 1. Compute the Promotion and Repetition Rates for a particular area.

	Gr 1	Gr 2	Gr 3	Gr 4	Gr 5	Gr 6
Promotion Rate	82.47%	90.18%	93.11%	93.22%	92.79%	96.32%
Repetition Rate	5.39%	3.29%	2.27%	1.60%	1.41%	0.37%

Step 2 & 3. Compute the number of promotees up to grade 6 using the promotion rates for the respective grade/year levels. Compute the number of pupils/students in grade/year 1 who repeat once, twice, up to 6 times.

		Promoted to Gr 2	Promoted to Gr 3	Promoted to Gr 4	Promoted to Gr 5	Promoted to Gr 6
Cohort with no repetition $_{SY N}$	1,000.00	824.70	743.74	692.53	645.58	599.05
Cohort repeating once $_{SY N+1}$	53.92					
Cohort repeating twice $_{SY N+2}$	2.91					
Cohort repeating thrice $_{SY N+3}$	0.16					
Cohort repeating four times $_{SY N+4}$	0.01					
Cohort repeating five times $_{SY N+5}$	0.00					
Cohort repeating six times $_{SY N+6}$	0.00					

Promoted Cohort $_{Gr X}$ x Promotion Rate $_{Gr X-1}$

Repeated Cohort $_{Gr 1}$ x Repetition Rate $_{Gr 1}$

Step 4. Add the repeaters in the previous grade level who were promoted with the pupils in the current grade level who repeated.

		Promoted to Gr 2	Promoted to Gr 3	Promoted to Gr 4	Promoted to Gr 5	Promoted to Gr 6
Cohort with no repetition $_{SY N}$	1,000.00	824.70	743.74	692.53	645.58	599.05
Cohort repeating once $_{SY N+1}$	53.92	71.62	81.49	86.96	90.17	85.87
Cohort repeating twice $_{SY N+2}$	2.91	4.76	6.14	7.11	7.90	7.65
Cohort repeating thrice $_{SY N+3}$	0.16	0.29	0.40	0.48	0.56	0.55
Cohort repeating four times $_{SY N+4}$	0.01	0.02	0.02	0.03	0.04	0.04
Cohort repeating five times $_{SY N+5}$	0.00	0.00	0.00	0.00	0.00	0.00
Cohort repeating six times $_{SY N+6}$	0.00	0.00	0.00	0.00	0.00	0.00

(Repeated Cohort $_{Gr X-1}$ x Promotion Rate $_{Gr X-1}$)
+ (Promoted Cohort $_{Gr X}$ x Repetition Rate $_{Gr X}$)

Step 5-7. Calculate the total for each grade level to obtain the pupil-years. Multiply the pupil-years with the respective promotion rate to get the total promotees (including repeaters). Calculate the reconstructed cohort survival rate for each grade level by dividing the Total Promotees $_{Gr X-1}$ (including repeaters) with the original cohort of 1000.

	Gr 1	Gr 2	Gr 3	Gr 4	Gr 5	Gr 6
Pupil-years	1,057.00	901.37	831.79	787.11	744.26	693.15
Total Promotees (including repeaters)	871.70	812.89	774.52	733.76	690.61	667.65
Reconstructed Cohort Survival Rate	100.00%	87.17%	81.29%	77.45%	73.38%	69.06%

1.8. Coefficient of Efficiency

This indicator measure the internal efficiency of the education system. It evaluates the impact of repetition and dropout on the efficiency of the educational process in producing graduates. It is calculated using the Pupil-Years and the Total Promotees (including repeaters) used in calculating the Reconstructed Cohort Survival Rate.

Elementary:

$$\frac{\text{Total Promotees}_{Gr 6} \text{ (including repeaters)}}{\text{Pupil-Years}_{Gr 1-6}} \times 6$$

Secondary:

$$\frac{\text{Total Promotees}_{Yr 4} \text{ (including repeaters)}}{\text{Pupil-Years}_{Yr 1-4}} \times 4$$

1.9. Years input per graduate

The indicator assesses the number of years it takes for an average pupil/student to graduate from the elementary/secondary level. It is calculated using the Pupil-Years and the Total Promotees/Graduates (including repeaters) used in calculating the Reconstructed Cohort Survival Rate.

Elementary:

$$\frac{\text{Pupil-Years}_{Gr 1-6}}{\text{Total Promotees}_{Gr 6} \text{ (including repeaters)}}$$

Secondary:

$$\frac{\text{Pupil-Years}_{Yr 1-4}}{\text{Total Promotees}_{Yr 4} \text{ (including repeaters)}}$$

1.10. Promotion Rate

The Promotion Rate assesses the extent of pupils/students who are promoted to the next grade/year level. The grade 6/year 4 promotion rate is the graduation rate for the elementary/secondary level. The computation used in the BEIS is slightly different from the official EFA formula since it utilizes the reported number of promotees rather than computing for the promotees using the present enrolment and the previous school year enrolment.

Elementary:

$$\frac{\text{Promotees}_{Gr X, SY N}}{\text{Enrolment}_{Gr X, SY N}} \times 100$$

Secondary:

$$\frac{\text{Promotees}_{Yr X, SY N}}{\text{Enrolment}_{Yr X, SY N}} \times 100$$

Where:

Promotees_{Gr X, SY N}
 Promotees_{Yr X, SY N}
 Enrolment_{Gr X, SY N}
 Enrolment_{Yr X, SY N}

- Previous SY Promotees (Table D - GESP & GSSP; Table A4 - PSP)
- Previous SY March 31 Enrolment + Dropouts (Table D - GESP & GSSP; Table A4 - PSP)

1.11. Repetition Rate

This is an EFA indicator which determines the magnitude of pupils/students who repeat a grade/year level.

Elementary:

$$\frac{\text{Repeaters}_{Gr X, SY N}}{\text{Enrolment}_{Gr X, SY N-1}} \times 100$$

Secondary:

$$\frac{\text{Repeaters}_{Yr X, SY N}}{\text{Enrolment}_{Yr X, SY N-1}} \times 100$$

Where:

Repeaters_{Gr X, SY N}
 Repeaters_{Yr X, SY N}
 Enrolment_{Gr X, SY N-1}
 Enrolment_{Yr X, SY N-1}

- Repeaters (Table A - GESP & GSSP; Table A1 & B1 - PSP)
- Previous SY March 31 Enrolment + Dropouts (Table D - GESP & GSSP; Table A4 - PSP)

1.12. School Leaver Rate

School Leaver Rate is the EFA measure for dropout rate. It covers both pupils/students who do not finish a particular grade/year level as well as those who finish but fail to enroll in the next grade/year level the following school year. It is theoretically more comprehensive than Simple Dropout Rate but becomes unreliable in areas with substantial migration. Care should be exercised in using this indicator at the level of the Divi-

sion, Municipal and Legislative Districts. The system does not allow use of School Leaver Rate at the school level where it is very likely to result in a misleading measure of dropout rate.

School Leaver Rate = 1 - Promotion Rate - Repetition Rate

Or

Elementary:

$$\frac{(\text{Enrolment}_{Gr X, SY N-1} - \text{Repeaters}_{Gr X, SY N}) - (\text{Enrolment}_{Gr X+1, SY N} - \text{Repeaters}_{Gr X+1, SY N})}{\text{Enrolment}_{Gr X, SY N-1}} \times 100$$

Secondary:

$$\frac{(\text{Enrolment}_{Yr X, SY N-1} - \text{Repeaters}_{Yr X, SY N}) - (\text{Enrolment}_{Yr X+1, SY N} - \text{Repeaters}_{Yr X+1, SY N})}{\text{Enrolment}_{Yr X, SY N-1}} \times 100$$

Where:

- Enrolment_{Yr X+1, SY N} - Enrolment (Table A - GESP & GSSP; Table A1 & B1 - PSP)
- Repeaters_{Gr X, SY N} - Repeaters (Table A - GESP & GSSP; Table A1 & B1 - PSP)
- Repeaters_{Gr X+1, SY N} - Repeaters (Table A - GESP & GSSP; Table A1 & B1 - PSP)
- Enrolment_{Gr X, SY N-1} - Previous SY March 31 Enrolment + Dropouts (Table D – GESP & GSSP; Table A4 - PSP)

1.13. Simple Dropout Rate

The Simple Dropout Rate calculates the percentage of pupils/students who do not finish a particular grade/year level. It does not capture pupils/students who finish a grade/year level but do not enroll in the next grade/year level the following school year.

Elementary:

$$\frac{\text{Dropouts}_{Gr X, SY N}}{\text{Enrolment}_{Gr X, SY N}} \times 100$$

Secondary:

$$\frac{\text{Dropouts}_{Yr X, SY N}}{\text{Enrolment}_{Yr X, SY N}} \times 100$$

Where:

- Dropouts_{Gr X, SY N} - Previous SY Dropouts (Table D - GESP & GSSP; Table A4 - PSP)
- Dropouts_{Yr X, SY N} - Previous SY Dropouts (Table D - GESP & GSSP; Table A4 - PSP)
- Enrolment_{Gr X, SY N} - Previous SY March 31 Enrolment + Dropouts (Table D - GESP & GSSP; Table A4 - PSP)
- Enrolment_{Yr X, SY N} - Previous SY March 31 Enrolment + Dropouts (Table D - GESP & GSSP; Table A4 - PSP)

1.14. Transition Rate

The indicator assesses the extent by which pupils are able to move to the next higher level of education (i.e. primary to intermediate and elementary to secondary). Care should be exercised in using this indicator at the level of the Division, Municipal and Legislative Districts where migration can increase or reduce the results of the indicator. It is not calculated at the school level for this reason.

Primary to Intermediate:

$$\frac{\text{Enrolment}_{\text{Gr 5, SY N}}}{\text{Enrolment}_{\text{Gr 4, SY N-1}}} \times 100$$

Where:

Enrolment_{Gr 5, SY N}
Enrolment_{Yr 1, SY N}

Enrolment_{Gr 4, SY N-1}

Graduates_{Gr 6, SY N-1}

- Aug. 31 Enrolment
(Table A - GESP & GSSP; Table A1 & B1 - PSP)
- Previous SY March 31 Enrolment + Dropouts
(Table D - GESP & GSSP; Table A4 - PSP)
- Previous SY Promotees/Graduates
(Table D - GESP & GSSP; Table A4 - PSP)

Elementary to Secondary:

$$\frac{\text{Enrolment}_{\text{Yr 1, SY N}}}{\text{Graduates}_{\text{Gr 6, SY N-1}}} \times 100$$

1.15. Completion Rate

The Completion Rate measures the percentage of grade/year 1 entrants who graduate in elementary/secondary education. It is available only up to the division level and above. Data for grade/year 1 are based on the predecessor of BEIS, the Unified Data Gathering System (UDGS), which did not have any validation procedures and did not monitor the completeness of the data submitted.

Elementary:

$$\frac{\text{Graduates}_{\text{Gr 6, SY N}}}{\text{Enrolment}_{\text{Gr 1, SY N-5}}} \times 100$$

Where:

Graduates_{Gr 6, SY N}
Graduates_{Yr 4, SY N}

Enrolment_{Gr 1, SY N-5}
Enrolment_{Yr 1, SY N-3}

- Previous SY promotees/graduates
(Table D - GESP & GSSP; Table A4 - PSP)
- based on UDGS division level data

Secondary:

$$\frac{\text{Graduates}_{\text{Yr 4, SY N}}}{\text{Enrolment}_{\text{Yr 1, SY N-3}}} \times 100$$

1.16. Failure Rate

This indicator evaluates the extent of pupils/students who failed a given grade/year level.

Elementary:

$$\frac{\text{Failures}_{\text{Gr X, SY N}}}{\text{Enrolment}_{\text{Gr X, SY N}}} \times 100$$

Where:

Failures_{Gr X, SY N}
Failures_{Yr X, SY N}

Enrolment_{Gr X, SY N}
Enrolment_{Yr X, SY N}

- Previous SY March 31 Enrolment - Promotees¹
(Table D - GESP & GSSP; Table A4 - PSP)
- Previous SY March 31 Enrolment + Dropouts
(Table D - GESP & GSSP; Table A4 - PSP)

Secondary:

$$\frac{\text{Failures}_{\text{Yr X, SY N}}}{\text{Enrolment}_{\text{Yr X, SY N}}} \times 100$$

¹ Failures = Enrolment - Promotees

1.17. Retention Rate

The Retention Rate determines the degree of pupils/students in a particular school year who continue to be in school in the succeeding year. This indicator is also vulnerable to migration and is not advisable to compute at the school level.

Elementary:

$$\frac{\text{Enrolment}_{\text{Gr 2-6, SY N}}}{\text{Enrolment}_{\text{Gr 1-5, SY N-1}}} \times 100$$

Secondary:

$$\frac{\text{Enrolment}_{\text{Yr 2-4, SY N}}}{\text{Enrolment}_{\text{Yr 1-3, SY N-1}}} \times 100$$

Where:

Enrolment_{Gr 2-6, SY N}
Enrolment_{Yr 2-4, SY N}

- Aug. 31 Enrolment (Table A - GESP & GSSP; Table A1 & B1 - PSP)

Enrolment_{Gr 1-5, SY N-1}
Enrolment_{Yr 1-3, SY N-1}

- Previous SY March 31 Enrolment + Dropouts
(Table D - GESP & GSSP; Table A4 - PSP)

HIGHLIGHTS

Periodic Labour Force Survey (PLFS) 2019-2020

Survey
Period

July 2019 to June 2020

Survey
Coverage

Surveyed

12,569 First Stage Units (FSUs)

Rural: 6,913 villages
Urban: 5,656 urban blocks

1,00,480 Households

55,291 in rural areas
45,189 in urban areas

4,18,297 Persons

2,40,231 in rural areas
1,78,066 in urban areas

The survey covered the whole of the Indian Union *except* the villages in Andaman and Nicobar Islands which remained extremely difficult to access throughout the year.

Approaches
for
presenting
Labour
Force
Indicators

Approaches followed for presenting Labour Force Indicators

usual status (ps+ss)
Reference period : 1 yearcurrent weekly status(CWS)
Reference period : 1 week

Note: #: related concepts in para.2.20 of Chapter Two

Some of the key results at the all-India level for the period July 2019 - June 2020 emerging from PLFS are highlighted below.

A. Households and Population

B. Labour Force in usual status (ps+ss)

LFPR
for persons
of all ages

Labour Force Participation Rate (LFPR) in usual status (ps+ss)
in India: 40.1%

rural

male: 56.3%
female: 24.7%

urban

male: 57.8%
female: 18.5%

Statement 6

LFPR
for persons
of age 15-29
years

Labour Force Participation Rate (LFPR) in usual status (ps+ss)
for persons of age 15-29 years in India: 40.9%

rural:
41.3%

urban:
40.0%

Statement 7

LFPR
for persons
of age 15
years and
above

Labour Force Participation Rate (LFPR) in usual status (ps+ss)
for persons of age 15 years and above in India: 53.5%

rural:
55.5%

urban:
49.3%

Statement 7

C. Workforce

WPR
in usual
status for
persons of all
ages

Worker Population Ratio (WPR) in usual status (ps+ss) in India: 38.2%

rural

male: 53.8%
female: 24.0%

urban

male: 54.1%
female: 16.8%

Statement 8

WPR
in usual
status for
persons of
age 15-29
years

Worker Population Ratio (WPR) in usual status (ps+ss) for persons of age 15-29 years in India: 34.7%

rural:
35.9%

urban:
32.1%

Statement 9

WPR
in usual
status for
persons of
age 15 years
and above

Worker Population Ratio (WPR) in usual status (ps+ss) for persons of age 15 years and above in India: 50.9%

rural:
53.3%

urban:
45.8%

Statement 9

Share (%) of self-employed among workers in usual status (ps+ss)

rural male :58.4	rural female :63.0	urban male :38.7	urban female :34.6
------------------	--------------------	------------------	--------------------

Share (%) of regular wage/ salaried employees among workers in usual status (ps+ss)

rural male :13.8	rural female :9.5	urban male :47.2	urban female :54.2
------------------	-------------------	------------------	--------------------

Share (%) of casual labour among workers in usual status (ps+ss)

rural male :27.8	rural female :27.5	urban male :14.1	urban female :11.1
------------------	--------------------	------------------	--------------------

Statement 12

Some industry of activity with share (%) of workers in usual status (ps+ss) in rural areas

Agriculture Sector	rural male: 55.4	rural female: 75.7	rural person:61.5
Construction Sector	rural male: 15.0	rural female: 5.6	rural person:12.2
Trade, hotel and restaurant Sector	rural male: 9.2	rural female: 3.7	rural person:7.6
Manufacturing Sector	rural male: 7.3	rural female: 7.3	rural person:7.3

Statement 13

Some industry of activity with share (%) of workers in usual status (ps+ss) in urban areas

Trade, hotel and restaurant Sector	urban male: 28.9	urban female: 22.3	urban person: 27.4
Manufacturing Sector	urban male: 20.3	urban female: 22.4	urban person: 20.8
Construction Sector	urban male: 12.0	urban female: 4.9	urban person: 10.3
Transport, storage & communications	urban male: 12.1	urban female: 3.6	urban person: 10.2

Statement 13

Some Occupation Divisions with share (%) of workers in usual status (ps+ss) in rural areas

Occupation
(Division of
NCO-2004)
of workers
in usual
status (ps+ss)

Division 1: Legislators, senior officials and managers	rural male: 6.3	rural female: 4.0
Division 2: Professionals	rural male: 2.0	rural female: 1.7
Division 3: Technicians and associate professionals	rural male: 2.1	rural female: 2.9

Statement 14

Some Occupation Divisions with share (%) of workers in usual status (ps+ss) in urban areas

Occupation
(Division of
NCO-2004)
of workers
in usual
status (ps+ss)

Division 1: Legislators, senior officials and managers	urban male: 17.8	urban female: 11.7
Division 2: Professionals	urban male: 8.8	urban female: 13.7
Division 3: Technicians and associate professionals	urban male: 6.1	urban female: 11.7

Statement 14

D. Earnings from employment, hours worked and hours available for additional work

Earnings from employment, hours worked and hours available for additional work

Estimates derived based on

- data collected in first visit schedule in rural areas; and
- data collected in first visit and revisit schedule in urban areas during for each of the survey periods July – September 2019, October- December 2019, January – March 2020 and April – June 2020

Information on earnings collected for
