

users' entitlement of Official Statistics as 'public good'. In furtherance of these principles, MoSPI is formulating a **National Policy on Official Statistics (NPOS)** which will act as the guiding principle towards establishing an improved Statistical System to bring in more synergy amongst Central and State Governments in statistical matters. This will focus on providing timely and credible social and economic data for evidence-based decision-making, promoting research, and fostering an ecosystem for informed debate on various social and economic issues affecting people's lives.

I.B National Statistical Commission Reinforcement

6.5 In pursuance of the recommendations of the National Statistical Commission under the Chairmanship of Dr. C. Rangarajan in 2001, the Government, vide Resolution dated 1st June 2005, constituted a National Statistical Commission (NSC) with a mandate to improve the statistical system and evolve a suitable statute for the purpose. The NSC was to evolve a statute in light of its own operational experience and also identify core statistics (statistics of national importance) where the resources of the government could be prioritised. Though the NSC, has since its inception, made a number of recommendations to improve the statistical system through its Annual Reports, yet, major structural changes remained mostly unexamined. The mandate of the NSC is far reaching and for it to perform its functions effectively, it needs to be suitably reinforced with appropriate professional autonomy in making implementable recommendations. At a time when the official statistical system is undergoing a paradigm shift, this assumes great significance. A similar transformation of the functioning of the national statistical system also needs to be undertaken, including that in MoSPI.

I.C Adapting Global Best Practices

6.6 MoSPI will leverage the framework of the **UN Generic Statistical Business Process Model (GSBPM)** (Figure 5.1) in statistical operations and services in the following areas:

- a) To define and describe statistical processes in a coherent and comprehensible manner;
- b) To compare and benchmark processes within and between statistical agencies or organisations;
- c) To make better decisions on statistical production systems and organisation of available resources.

6.7 MoSPI recognises that the GSBPM is not a linear model and the sub-processes need not follow a strict order. Thus, while adapting the GSBPM, it will be considered to be a process matrix, through which there are many possible alternative paths, including iterative loops within and between phases, that will be identified and prioritised. The GSBPM will involve planning, implementation and assessment of the various components.

6.8 In brief, the major steps to be undertaken under **Strategy I** are:

- a) Drafting and finalising a **National Policy on Official Statistics** for furthering the UN Fundamental Principles of Official Statistics.
- b) Strengthening the **National Statistical Commission** through wider consultation and active involvement of central and state governments, industry, academia and civil society.
- c) Establishing a statistical framework for operationalising the **Generic Statistical Business Process Model (GSBPM)** in statistical operations and services. This will involve integration of statistical processes, statistical datasets and convergence of multi-disciplinary concepts and definitions.
- d) Establishing an **agile institutional framework** in MoSPI that encourages innovation, incubation and development of new ideas and processes. This requires internal restructuring within the Ministry so that various Divisions become more cohesive and agile through process and product reforms.
- e) Establishing **strategic partnership and synergies** with institutes of excellence in statistical operations and leveraging best practices for continuous improvement in data quality, especially for the SDGs.

Strategy II: Strengthening Technological and Physical Infrastructure

7.1 Reforms in the statistical system are inextricably linked with the adoption of latest technologies in statistical processes and products to ensure responsiveness of the system to the needs of the economy. MoSPI has recently taken up several IT initiatives at various levels for improving data-gathering, storing, processing and dissemination of statistical information. However, a lot more remains to be done, especially for exploiting and embracing technological advancements, and MoSPI is committed to undertake these during the next five years.

7.2 The National Statistical System continues to grapple with legacy systems, data silos and a shortage of capability in delivering digital transformation. As the nodal Ministry for statistical activities, the immediate priority is to make available socio-economic data that are spread across different Government Agencies at one place by integrating these data sets for real time monitoring and now casting of macroeconomic indicators. This will necessarily entail evolving data sharing protocols and standards amongst the agencies. The broad principles governing the IT interventions of MoSPI are anchored in the **Generic Statistical Information Model (GSIM)**, which describes the information objects and flows within the statistical business process and the **Common Statistical Production Architecture (CSPA)**, which will make it easier for each organization to standardize and combine the components of statistical production, regardless of where the statistical services are undertaken. The protocols for data exchange will use **SDMX** and Data Documentation Initiative (**DDI**) as necessary across various data systems.

II.A Leveraging Technology for Statistical Products, Processes and Services

7.3 MoSPI is in the process of developing a **National Integrated Information Portal (NIIP)** for official statistics in the country. NIIP will be the state-of-the-art digital repository of all official statistics with homogenized meta-data. NIIP will provide high end platform for data analytics and interpretation of socio-economic data to Central Ministries/State Governments and other stakeholders, including general public. This will also have a dashboard for socio-economic indicators for real time monitoring and now-casting of macro-economic indicators.

7.4 The development of NIIP comprises three phases. In first phase, all statistical activities of MoSPI will be integrated while in second phase, the key data sets available with the Central Ministries/Departments/Agencies will be integrated using technological solutions for seamless flow of sharing of data. In the third phase, data available in State Government Agencies will be on-boarded on NIIP. In the final phase, NIIP is to be made fully operational to monitor the health and progress of the economy on a real time basis and to suggest leads for sector specific interventions based upon data analytics. The NIIP will facilitate the flow of information for the SDGs and also for quicker generation of key macroeconomic indicators.

II.B Leveraging Technology for Statistical Surveys

7.5 The socio-economic surveys conducted by the MoSPI provide a panoptic insight of socio-economic conditions in the economy. While the demand for such surveys on a regular basis to bridge the data gaps on various sectors of economy has witnessed an upward trend, this also puts increased pressure on the existing systems to deliver the

results of the surveys quickly and without compromising on data quality. MoSPI has been traditionally using paper schedules to collect information from the field – households and establishments. The paper-based survey method mostly entailed tedious data processing, data scrutiny, etc. which has a cascading impact on the timely release of the results. The Ministry had first introduced Computer Aided Personal Interview (CAPI) module for ongoing Periodic Labour Force Survey. The CAPI software platform enables seamless transition from Paper Aided Personal Interview (PAPI) system in an intelligent, simple and efficient manner using IT solutions. It also offers effective management of survey operations through its set of survey management tools such as management of individual interviews (cases), data transfer and data export of interviews (cases) into a standard format. The Ministry intends to develop an in-house CAPI module for all its socio-economic household and establishment surveys. This will enable quick data capturing in digital mode at the field level, thereby significantly reduce time lag and facilitate better monitoring of the field operations through analysis of para data

II.C Architectural Strengthening of MoSPI by Leveraging Technology

7.6 The general structure and layers for these reforms are illustrated in Figure 7.1 below, summarises the transformational approach using the global models and guidelines evolved by the United Nations.

Figure 7.1: Business and Technological Integration in MoSPI

II.D Coordinated integration of registries

7.7 As brought out earlier, various governmental and statistical agencies create registries for their administrative requirements and monitoring of schemes. There is a need to facilitate the flow of information across such registries for production of integrated statistics. A conceptual model is given in Figure 7.2

Figure 7.2: Coordinated Information Flow across Registries

7.8 Efforts are on by various agencies for improving the existing registries as also creation of new ones that do not exist. For instance, there are several platforms available for the Registry of Individual Persons like the Unique Identification (Aadhaar), the Permanent Account Number (PAN), etc. and efforts are on for integration and linking the two sets. Similarly, efforts are on by the Survey of India for mapping the geographic terrain using drones and high resolution imagery. There is a need to holistically examine information across such registries for providing useful insights for effective policy interventions. This will require intense coordination amongst governmental and non-governmental agencies to facilitate the flow of information without compromising on confidentiality and data privacy concerns. This soft integration will be operationalised through the NIIP architecture.

Use case – National Statistical Business Register

7.9 MoSPI is conducting 7th Economic Census which lists out all establishments/enterprises in the country. The Economic Census will provide a framework for dynamic National Business Register which can be updated using the data available with the MCA, GSTN, ESIC, EPFO etc. Many State Governments have initiated the process of preparing their own business register by integrating all their establishments. For instance,

Rajasthan has been successful in developing business register with unique Business Registration Number (BRN) thereby integrating business establishments in that state. These successful use cases can be up-scaled at the national level. The **National Statistical Business Register** generated through Economic Census can provide a platform for integration of databases of business establishments/ enterprises in the country. To sum up, creation of a common database of individuals who are availing the benefits of the Government welfare schemes as well as of the establishments and enterprises will go a long way in improving efficiency of the system.

7.10 The Ministry also reviews the progress of implementation of large central sector infrastructure projects costing Rs. 150 crore or more for time and cost overruns. Presently there are over 1600 projects that are being monitored on a monthly basis. The monitoring needs to improve so that the Government can identify projects that have potential for quick completion and prioritise investments accordingly.

II.E Physical Infrastructure

7.11 Presently, MoSPI is functioning from six different locations scattered across Delhi. Majority of MoSPI's important statistical activities such as bringing out GDP, IIP, CPI etc. require constant co-ordination and interaction between Line Ministries, State Governments and within the Ministry, which is becoming increasingly difficult in the present set up and has had adverse impact on the operational issues and functioning of the Ministry. MoSPI has taken initial steps to procure an integrated building complex for intensifying various statistical and coordination activities of the Ministry and for creating conducive working environment with enhanced efficiency and synergy.

7.12 The specific activities to be undertaken under this strategy include:

- a) Inter-Ministerial Coordination Committee for integration of information systems.
- b) Development of the National Integrated Information Portal Project as the underlying technology initiative.
- c) Development of a Generalised Survey Solution for the National Sample Surveys.
- d) Procurement of office infrastructure for MoSPI.

Strategy III: Effective Human Capital Management

8.1 The demand for data poses significant challenges to the National Statistical System in terms of capacity building. While data revolution offers tremendous opportunities for producing more and better data quickly, however, in order to reap the benefits of changes in technology, a capacity enhancement has to take place simultaneously. The statistical system at the central and state government level is facing an acute shortage of manpower at various levels and this needs to be augmented on priority, both in terms of numbers as well as skill sets, so that the existing and envisaged role can be performed. With the advent of tools such as Big Data Analytics, Machine Learning etc. for developing capabilities of existing manpower resources needs to be addressed through a comprehensive Human Capital Management strategy.

8.2 It is the people who transform systems. Staff working in statistical units of Governments needs to develop new skill sets that enable them to harness new technologies, apply complicated statistical methodologies, understand complex policy issues, and effectively communicate and negotiate. Besides comprehensive capacity development programmes, part of technical capacity building can be fulfilled through regular and structured user-producer dialogues.

8.3 In so far as training of existing statistical manpower is concerned, a key role is being played by the dedicated National Statistical Systems Training Academy (NSSTA), Greater Noida. The academy's role is primarily confined to induction training programmes for statistical cadres of central government and in-service short-term refresher courses for the statistical personnel of central and state governments. Some training capacities in official statistics also exist in a few States, but these are mostly inadequate.

8.4 The demands for more nation-wide surveys is increasing and the National Sample Survey (NSS) is now required to undertake 4-5 new surveys each year when it was conventionally doing only one survey each year. As regular staff cannot be increased overnight to undertake the increased workload of new surveys, it requires adopting a strategy of outsourcing of field work. Accordingly, the NSS employed manpower agencies to provide survey enumerators which were then trained in-house before being deployed to the field. The field monitoring and supervision was undertaken by the regular statistical manpower. Technology is also being used now for the data collection on electronic devices/tablets to facilitate quicker data processing. These interventions are being done at the national level, however, state governments do not have that flexibility to engage statistical manpower on contractual basis, as a result of which their state surveys are impacted.

8.5 While conducting the Economic Census of all establishments during 2019, MoSPI has collaborated with the Common Service Centres of Ministry of Electronics and IT for undertaking the field work. This required intense training and capacity building before the field operations could commence and it was possible to adopt this approach as the information being sought is limited. For a detailed socio-economic survey, more qualified and trained manpower resources would be required. Thus, a hybrid approach would need to be adopted for undertaking additional surveys using a combination of regular and contractual manpower resources.

8.6 To meet the current and ever-growing needs of a modern and decentralized statistical system, human capital management needs to be strong and dynamic. MoSPI plans to undertake a comprehensive review of human capital management practices for the national statistical system. This review, among other things will cover assessment of HR capacities, assessing future requirements, conducting a gap analysis and suggesting strategies for closing these gaps. A roadmap and an action plan will be evolved to strengthen the human development activities in the short-run as well as in the long-run. The data revolution for sustainable development has also triggered interest in the use of big data, machine learning, and artificial intelligence for official statistics. Recognizing its potential, countries around the globe have already started leveraging these emerging analytical tools in their statistical system to generate real time information products. In order to utilise these modern analytical tools in the official statistical system, there is a need to inject requisite skill set in the existing human resources. Therefore, one of the thrust areas of reform activities of MoSPI during the next five years is to augment the capacity and skills of human resources to respond to the changing demands.

8.7 The NSSTA will be the focal point for Human Capital Management and will be developed as a **Centre of Excellence** in official statistics in the country. This will require expanding the footprint of NSSTA in regional areas for meeting its enhanced role, envisioned in Vision 2024. It will also collaborate with international agencies for training in global best practices and prepare professionals with analytical skills using Big Data, Artificial Intelligence and other emerging technologies. NSSTA will also create a pool of professionals for providing consultancy/research/innovative services in the official statistics. It will formulate appropriate course curriculum and e-learning modules on official statistics to be made mandatory at undergraduate level in all institutions. The feasibility of introducing administrative statistics as a topic in the training curriculum of various training institutes/ academies imparting training to service personnel in the Civil Services will be examined for implementation.

8.8 MoSPI is also interacting with the Ministry of Skill Development and Entrepreneurship (MSDE) to evolve course content for survey enumerators, field inspection, supervisors and data quality personnel. The aim is to open and develop the market for such survey enumerators that can be hired by professional agencies and

manpower consultants for undertaking surveys by central and state governments. Modalities for course content, assessment, evaluation and certification are being worked out using the Sector Skill Council framework evolved under the National Skill Development Corporation setup.

8.9 The specific activities to be undertaken under this strategy includes the following:

- a) Large scale capacity building of statistical personnel on contemporary statistical techniques and methodologies including Big Data Analytics, Artificial Intelligence and Machine Learning.
- b) Enhancing capacities in the National Statistical Systems Training Academy for training of statistical manpower including exposure to international best practices.
- c) Assessing the statistical capacities in central and state governments for augmentation and enhancement.
- d) Cadre review of Indian Statistical Service and Subordinate Statistical Service to augment statistical capacities at the central government level.
- e) Finalising and rolling out capacity building programmes for survey enumerators to be run by the MSDE skill development ecosystem to facilitate and enhance national and state level survey capacities.
- f) Empanelment of manpower agencies with skilled survey enumerators to be used by central and state government statistical institutions.

G. Revamped National Statistical System – Expected Outcomes

9.1 The broad outcomes of the revamped system include the following:

- a) **Improved statistical processes and products that are**
 - Relevant
 - Accurate
 - Reliable
 - Timely / Punctual
 - Accessible
 - Coherent
 - Comparable – spatially, temporally and internationally

- b) Better data integration with minimal redundancies
- c) Multi-disciplinary statistical products
- d) Partnerships and intense collaboration among stakeholders of statistical products
- e) Improved user-producer discussion and dissemination forum.

This will be facilitated by the transformational processes proposed in the Vision Document and illustrated in the Figure 9.1 below.

Figure 9.1: Architectural Framework for Integrated Statistics Approach

H. Five Year Strategic Focus And Activities

H.I Themes, Goals and Key Strategic Activities

Themes	Goals	Strategic Activities
1. Strengthening Institutional Framework	1.1 Establish an effective legal and policy statistical framework	1.1.1 National Policy on Official Statistics will be formulated and notified giving the role and responsibilities of MoSPI to spearhead the reform processes in the national statistical system. 1.1.2 A bill on strengthening the National Statistical Commission (NSC) will be drafted and introduced in Parliament with a view to establish NSC as a professionally autonomous entity for providing strategic direction and guidance to the national statistical system and for data quality assurance. 1.1.3 Customise/ Develop a Quality Assurance Framework for statistical products and processes. 1.1.4 Evolve a framework for progressively enhancing the use of administrative statistics across agencies. 1.1.5 Establish institutional mechanism for facilitating data integration. 1.1.6 Implement Code of Ethics for members of various committees of MoSPI to ensure professional ethics while dealing with data which are not in the public domain. 1.1.7 Strengthen the framework for monitoring of SDGs. 1.1.8 Strengthening data dissemination structure and user engagement through: a. Advance Release Calendar for key statistical products b. Development of media policy/ plan of MoSPI for dissemination and user engagement c. Regular data producer-user conferences and user feedback mechanisms
	1.2 Strengthen statistical processes and procedures, and develop new statistical products	1.2.1 Assess existing statistical products/ processes w.r.t. the Quality Assurance Framework for improvement. 1.2.2 Prepare a compendium of data sets and registries of Central Ministries and State Governments, their metadata and legislative provisions. 1.2.3 Develop statistical data and metadata exchange protocol amongst Central and State Governments and other agencies including international organizations. 1.2.4 Bring out Fact sheet of Indian Economy for regular monitoring of the economy. 1.2.5 Develop National Statistical Business Register.

H.I Themes, Goals and Key Strategic Activities

Themes	Goals	Strategic Activities
2. Strengthening Technological and Physical Infrastructure of statistical system	2.1 Develop an integrated technology platform for official statistics	2.1.1 Develop National Integrated Information Portal/ Data Warehouse for official statistics.
		2.1.2 Develop and implement IT based Generalised Survey Solutions (GSS) for all socio-economic household and establishment surveys
	2.2 Strengthen the monitoring of infrastructure projects	2.2.1 Revamp the existing mechanism for online monitoring of large infrastructure projects.
	2.3 Strengthening physical infrastructure of MoSPI	2.3.1 Procure building for MoSPI for effective coordination of statistical activities with enhanced efficiency.
	3.1 Enhancement of skills	3.1.1 Undertake training and skill need assessment in national statistical system and develop system wide national training policy in official statistics for use by central and state governments.
		3.1.2 Establish a Consultancy cum Innovation Cell to cater to the increasing demand for professional statistical services of Government organisations and to promote Research, Development and Innovation in Official Statistics.
		3.1.3 Policy framework for training
	3.2 Enhancing training infrastructure on official statistics	3.2.1 Strengthen the physical and IT infrastructure of NSSTA.
		3.2.2 Establish Zonal/ Regional training centres for building capacities at pan India level

H.II Aggressive Timelines for Vision 2024

- 10.1 To achieve the objectives as set out in the preceding paragraphs, there is a need for fast-tracking the activities with setting the milestones with aggressive timelines and continuous monitoring. The Vision 2024 of MoSPI will be realised through phase/component-wise activities requiring synergised and coordinated approach within the Ministry with requisite support from stakeholder Ministries/ Departments in terms of physical, financial and technical modalities. The timelines for various strategic interventions are given in following statement.

H.III Details and Timelines for Various Strategic Activities

Themes	Goals	Strategic Activities	Year 1	Year 2	Year 3	Year 4	Year 5
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1 Strengthening Institutional Framework	1.1 Establish appropriate legal and policy framework	1.1.1 National Policy on Official Statistics (NPOS) will be formulated and notified enabling MoSPI to spearhead the reform processes in the national statistical system.	Upto 31.3.2020 Finalise Cabinet note on NPOS and circulate for inter- Ministerial consultation. Seek approval of Cabinet Finalise Action Plan for Implementation Constitute a Task Force to prepare a roadmap for implementation of NPOS Set up an NPOS implementation cell	1.4.2020-31.3.21 Follow up on implementation and Year-end report on implementation of NPOS	1.4.2021-31.3.22 Follow up on implementation and Year-end report on implementation of NPOS	1.4.2022-31.3.23 Follow up on implementation and Year-end report on implementation of NPOS	1.4.2023-31.3.24 Follow up on implementation and Year-end report on implementation of NPOS
		1.1.2 Draft bill on National Statistical Commission (NSC) will be introduced in Parliament with a view to establish NSC as a professionally autonomous entity that shall provide strategic direction, guidance and quality assurance to the national statistical system.	Finalize various contours of draft NSC Bill to be introduced in Parliament	After approval of NSC Bill by Parliament, process for enactment of NSC Act and Rules	MoSPI to facilitate NSC in review of the statistical systems and functioning in Central Ministries and States	MoSPI to facilitate NSC in review of the statistical systems and functioning in Central Ministries and States	Review of implementation of working of NSC and NSC Act

H.III Details and Timelines for Various Strategic Activities

Themes	Goals	Strategic Activities	Year 1	Year 2	Year 3	Year 4	Year 5
(1)	(2)	(3)	Upto 31.3.2020 (4)	1.4.2020-31.3.21 (5)	1.4.2021-31.3.22 (6)	1.4.2022-31.3.23 (7)	1.4.2023-31.3.24 (8)
		Formulate Draft NSC Bill and seek the approval of Cabinet		NSC Secretariat to be strengthened for implementation of the provisions of the Act			
		Introduce NSC Bill in Parliament					
		1.1.3 Customise/Develop a Quality Assurance Framework (QAF) for statistical products and processes	Establish Data Quality Assurance Division (DQAD)	Report of Task Force on adoption of a QAF for India, and an assessment toolkit	Implement Data Quality Assurance both in surveys and administrative data.	Encourage third party evaluation of quality of statistical products	Placing the product specific Quality Fact sheets in Public Domain
			Exposure/ Training on international practices on Data Quality Assurance methods to a core team of MoSPI	Development of a training module on QAF for statistical personnel			
			Introducing QA concepts in survey methodology under the supervision of the core team for baseline assessment of top 5 selected national and state level statistical products

H.III Details and Timelines for Various Strategic Activities

Themes	Goals	Strategic Activities	Year 1	Year 2	Year 3	Year 4	Year 5
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
		1.1.6 Implement Code of Ethics for members of various committees of MoSPI to ensure professional ethics while dealing with data which are not in the public domain.	Upto 31.3.2020	1.4.2020-31.3.21	1.4.2021-31.3.22	1.4.2022-31.3.23	1.4.2023-31.3.24
		1.1.7 Strengthen the framework for monitoring of SDGs	Regular meetings of High-level Committee on SDGs set-up at the central level for reviewing NIF, etc.	Development of State Indicator Frameworks (SIF) for monitoring State level SDGs	Strengthening SDG monitoring capacity at national level with interactions with international agencies	Release of reports on updated status on SDGs at national and state levels	Release of reports on updated status on SDGs at national and state levels
			Undertake capacity building measures of State Govts., like conducting workshops/ conferences on international developments on SDGs and NIF	Setting up of high-level Committees in States on issues of SDGs, including reviewing of SIF	Enhance capacities of State Govts. on SDGs		National level review of SDG progress in the country vis-à-vis the world
				Release of reports on updated status on SDGs at national and state levels	Release of reports on updated status on SDGs at national and state levels		

H.III Details and Timelines for Various Strategic Activities

Themes	Goals	Strategic Activities	Year 1	Year 2	Year 3	Year 4	Year 5
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
			Upto 31.3.2020	1.4.2020-31.3.21	1.4.2021-31.3.22	1.4.2022-31.3.23	1.4.2023-31.3.24
				Undertake nation-wide survey to address data gaps on SDGs			
		1.1.8 Strengthening data dissemination structure and user engagement		MoSPI to compile and disseminate Consolidated Release Calendar of central Ministries statistical products based on 'formal release calendars'.	MoSPI to work with Ministries and State Governments to formalise Advance Release Calendar for all Statistical products.	MoSPI to work with Ministries and State Governments to formalise Advance Release Calendar for all Statistical products.	MoSPI to work with Ministries and State Governments to formalise Advance Release Calendar for all Statistical products.
				MoSPI to organise or facilitate organisation of different sector-specific data user conferences to review the availability and requirement of official statistics in different sectors	MoSPI to organise or facilitate organisation of different sector-specific data user conferences to review the availability and requirement of official statistics in different sectors	MoSPI to organise or facilitate organisation of different sector-specific data user conferences to review the availability and requirement of official statistics in different sectors	MoSPI to organise or facilitate organisation of different sector-specific data user conferences to review the availability and requirement of official statistics in different sectors
				Prepare media plan and launch public awareness campaign		Introduce online feedback mechanism	
					Bringing out quarterly newsletter of MoSPI on regular basis	Organize Stats India Programme in major Universities and States/UTs	

H.III Details and Timelines for Various Strategic Activities

Themes	Goals	Strategic Activities	Year 1	Year 2	Year 3	Year 4	Year 5
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
	1.2 Strengthen statistical processes and procedures, and develop new statistical products	1.2.1 Assess existing statistical products/ processes w.r.t. the Quality Assurance Framework for improvement	Upto 31.3.2020	1.4.2020-31.3.21	1.4.2021-31.3.22	1.4.2022-31.3.23	1.4.2023-31.3.24
				Starting from DOAD and FOD, impart training to statistical personnel on QAF	Quality assessment of some, say 30, statistical products as per the recommended QAF	Report on achievement of quality levels	Third party data quality evaluation
					Laying down of quality levels to be achieved for assessed statistical products and timelines for achieving these	Implementing scheme for QAF incentivisation	Implementing scheme for QAF incentivisation
					Evolving a system for encouraging and incentivising Central and State Statistical systems to pursue QAF		Review of QAF for refinement
		1.2.2 Prepare a compendium of statistical data sets and registries of Central Ministries and state governments, their metadata and legislative provisions	Preparation of compendium of statistical data sets and registries of Central Ministries for key statistical indicators along with metadata	Preparation of compendium of statistical data sets and registries of Central Ministries for other statistical indicators and their metadata	Expand Compendium to include statistical data sets of State Governments. Initiate work for metadata mapping and soft harmonised mapping	Prepare Framework Architecture for Metadata harmonisation and finalise in consultation with stakeholders	Finalise protocols for dynamic updation of Metadata Framework Architecture using SDMX, API, etc.

H.III Details and Timelines for Various Strategic Activities

Themes	Goals	Strategic Activities	Year 1	Year 2	Year 3	Year 4	Year 5
(1)	(2)	(3)	Upto 31.3.2020	1.4.2020-31.3.21	1.4.2021-31.3.22	1.4.2022-31.3.23	1.4.2023-31.3.24
		1.2.3 Develop statistical data and metadata exchange protocol amongst Central and State Governments and other agencies including international organizations	Training of trainers on SDMX	Collate and consolidate statistical data requirements of central ministries based on compendium of official statistics	Formulate a National Statistical Clearing House for collection of governmental data for statistical purposes		
			Development of training module on SDMX for statistical personnel	Training of statistical personnel on SDMX of central ministries			
				Formalise arrangements through MoUs etc. with Central Ministries and State Governments for data and metadata exchange protocol			
				MoUs with International Organisations in this field			
		1.2.4 Bring out Fact Sheet of Indian Economy for better monitoring of Indian Economy.	Prepare a list of 100+ socio-economic indicators to assess India's economic and social progress on monthly basis	Bring out a dynamic Fact Sheet of 25 key Socio-Economic indicators of Indian Economy on a monthly basis	Bring out a dynamic Fact Sheet of 50 key Socio-Economic indicators of Indian Economy on a monthly basis	Bring out a dynamic Fact Sheet of 75 key Socio-Economic indicators of Indian Economy on a monthly basis	Bring out a dynamic Fact Sheet of 100+ key Socio-Economic indicators of Indian Economy on a monthly basis
		1.2.5 Develop National Statistical Business Register (NSBR)	Conduct 7th Economic Census(EC)	Preparation of Detailed Project Report (DPR), laying down the	Develop a dynamic Business Registrar based on registers/	Conduct 8th Economic Census(EC)	

H.III Details and Timelines for Various Strategic Activities

Themes	Goals	Strategic Activities	Year 1	Year 2	Year 3	Year 4	Year 5
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
			Upto 31.3.2020	1.4.2020-31.3.21	1.4.2021-31.3.22	1.4.2022-31.3.23	1.4.2023-31.3.24
				strategy of implementation for development of NSBR	data of States/UTs		
			Release results of 7th EC	Implementation in 5 States for development of NSBR	Implementation in 25 States for development of NSBR	Implementation in all States for development of NSBR	
			Compilation and study of registers of Central/ State Government establishments				
			Preparation of a concept paper on development of NSBR				
2.Strengthening Technological and Physical Infrastructure of statistical system	2.1Develop an integrated technology platform for official statistics	2.1.1Develop National Integrated Information Portal (NIIP), including a Data Warehouse, for official statistics	Floating of RFP for hiring an agency for development of NIIP; Selection and onboarding of Systems Integrator	Phased implementation for integration of statistical data from 5 key Ministries into NIIP	Phased implementation for integration of statistical data from 15 key Ministries into NIIP	Phased implementation for integration of statistical data from 15 key Ministries into NIIP and major State Governments	Integration of all statistical databases and registries into NIIP, with NIIP to be one-stop digital platform and repository of all major official data sets of Central & State Government agencies
			Setting up a PMU for facilitating implementation of NIIP, GSS and other IT initiatives of MoSPI	Phased integration of data of State Government DES's into NIIP	Phased integration of data of State Government DES's into NIIP	Phased integration of data of State Government DES's into NIIP
